

Modern fencing

Fencing and walling products provide a modern look and a long-lasting result

Realising it would take quite some time to complete their planned home renovations, Anna and her husband, owners of this Adelaide property, decided to start the transformation process with a new front fence for safety and privacy.

“The first issue we needed to tackle was the massive street frontage. There was no privacy from those walking or driving past, which meant the large space at the front of our house was of no value to our family,” says Anna.

But privacy wasn't the only issue. With three young kids and a dog to protect, ensuring the property was secure was vital. “After conducting our research, we decided on a product from Foamfast, a company that has been in the marketplace for more than 10 years,” says Anna. “Foamfast specialises in fencing solutions and offers a product that is made of an expanded

polystyrene core reinforced with fibreglass mesh. The material is durable and provides the same look as a traditional rendered-brick fence.

“After Foamfast installed the front fence, they went on to create additional privacy walls and planters for us.”

Foamfast is made in South Australia where the experienced in-house insulation team is dedicated to ensuring that every project is completed to the highest standards. If you need to arrange for installation, the company works with installers nationally experienced in both residential and commercial projects.

For going down the DIY route, Foamfast has a strong Australia-wide distribution network and can deliver DIY items within three to five days. And whether you're a builder or homeowner, you have the peace of mind that comes from knowing the panels have a 10-year warranty. ■
