

## The simple solution

Do-it-yourself ready-rendered outdoor screens, garden walls and water features

**TO CREATE AN ATTRACTIVE SCREEN OR FEATURE** in a small outdoor space, simply attach Foamfast's pre-rendered external panels to a courtyard fence or balcony wall. Foamfast panels can also be used in pool areas to hide an existing fence. Or, if you prefer, use them to create a ready-made standalone wall or screen; even planter boxes and water features.

Foamfast's new-generation external fencing and walling panels are made of expanded polystyrene

which is core reinforced with fibreglass mesh. This makes the panels solid but lightweight, which is why they are so easy to move and the ideal walling and screening solution for balconies, roof terraces and decks.

Foamfast's range of pre-coated walls and feature screens is extensive and includes 120mm solid wall panels which stand 1800mm high and have posts installed – all you need to do is concrete them into the ground. Foamfast also has a range of ready-to-

hang 40mm screens that you simply attach to an existing fence to create a rendered feature.

"Our panels offer exciting opportunities for the do-it-yourself, designers and builders as they can be used to create straight or curved walls. This flexibility also makes it possible to combine different options such as timber slat infills, aluminium screens, lighting, intercoms, sliding gates and much more," says Julian Waterman of Foamfast. "Strong but lightweight, the panels are easy to

install and they're the ideal solution when weight is an issue, such as on balconies and roof terraces," he continues.

"All panels are manufactured using a fire retardant additive and the insulating properties bring acoustic benefits for those who live on busy streets. A Foamfast fence or wall will withstand a certain amount of ground movement and expansion and the panels can have a six-star energy rating."

Foamfast walling panels, which boast superior strength and durability, and are easy to install compared to traditional masonry walls, are made in South Australia where the experienced in-house installation team is dedicated to ensuring that every project is completed without fuss and to the highest standards.

For builders or those going down the do-it-yourself route, Foamfast distributes Australia-wide factory-direct from its plant in Adelaide. The

company also gives landscapers, builders and homeowners the peace of mind that comes from knowing the panels have a 10-year warranty.
